

This is a Shared Resource calendar

This is my calendar... now it also shows all the Shared conference rooms as calendars

This is just a calendar shared from another user that I wasn't syncing on my desktop, but now, it also appears here

These are shared "Conference rooms", not calendars. THEY DIDNT SHOW before the latest update... and they should not be here as separate calendars when syncing with CalDAV my calendar

This is a shared calendar of an account of the same domain, I was using CalDAV to sync it, but now it also appears on my JEG cal CalDAV and now it also syncs all the Shared conference rooms as 'calendars' inside the same account.
